
Clinical claim at LoD concentration $c^\star$ (e.g. two lots “equivalent” ⇒ estimand G2)
S0: lock one detection estimand before wet work
G1
Verify LoD
G2
Compare
G4
k
Folklore bypass: skip S5 → fixed n=20
Asymptotic ≠
exact at small n (P8)
Failure port
$n/n \not\Rightarrow$ 95% (P7)
S0
Goal
S1
Hit-rate
S5
Plan n
S6
Exact
S7
Report
Failure port
G2: n=20 ⇒ $\beta \approx 0.93$ (P18)
Optional EP17 continuous path: S2–S4 LoB (Supplement Fig S-LoB)
Input: protocol claim · hit-rate / binary data
Remedy: powered $n^\star$ from OC (Fig 2) · Pareto check (Fig 3) · protocol contrast (Fig 4)
Output: planned n · exact OC · audit JSON
